

Sustainability is now a strategic priority for many public and private sector organizations around the way. So it is natural that sustainability thinking is extending into events of all types.

Through responsible operating practices, Bellagio exemplifies environmental sustainability. Just by hosting an event at Bellagio, you are already reducing the environmental impacts of your meeting. We also offer a full menu of ideas to help our clients further enhance the social & environmental benefits of the events they plan with us.

Responsible Operating Practices

Bellagio has been awarded 5 Green Keys, the highest level of certification from Green Key Global Hotel and Meetings Programs which are the leading international environmental certification body for the hotel and meetings industry.

- **Energy** - Bellagio is lit by LEDs: we have changed over 1.5 million lights to energy efficient LEDs across all of our MGM Resorts venues.

- **Water** - The world-famous fountains at Bellagio are fed with water from plentiful wells onsite, avoiding potable water from Lake Mead or the Colorado River.
- Unlike most cities, nearly every gallon of water used inside MGM Resorts properties in Las Vegas is replenished after treatment back to the source, Lake Mead or the Colorado River. This surprising circularity of water flows is not common in the U.S. but is enabled in Southern Nevada due to smart water infrastructure planning in the region.

- **Waste** - At Bellagio, and all MGM Resorts Las Vegas properties, we recycle for guests by separating recyclables from trash behind the scenes and have a robust food waste program that diverts food scraps to a local pig farm.

- **Hunger** - Through a partnership with Three Square Food Bank, unserved event food from Bellagio, and other MGM Resorts properties, is collected by Three Square Food Bank and immediately transported to their facility to be deep-frozen. Based on the community's demand, the food is reheated and served directly to those in need at local non-profits.
